Objective:

A highly motivated and detail-oriented individual seeking a software engineer position to leverage my strong programming skills and knowledge of web development technologies.

Objective:

A highly motivated and detail-oriented individual seeking a software engineer position to leverage my strong programming skills and knowledge of web development technologies.

Skills:

Solid Foundation in HTML, CSS, Bootstrap, JavaScript, APIs, Node.js, Express.js, MySQL, MongoDB, and React.

Strong problem-solving and analytical abilities.

Excellent teamwork and communication skills.

Self-motivated and eager to learn new technologies.

Attention to detail and ability to meet deadlines.

Projects:

Retail Backend Project: Developed a SQL database that can be accessed with the terminal and directly manipulate data with the API routes written.

<https://github.com/christian6404/M13companyDB>

The Notetaker: Created a online note taking app that stores the responses in storage so if you close the browser and reopen the url the inputs are saved.

<https://github.com/christian6404/notetaker>

Steam Game Reviews : Built a dynamic web application using Node, Express, Handlebars, Mysql & Sequelize, Bootstrap to search the popular gaming platform steam and create reviews for any game you like. It features a full

login system and procedural generation using javascript. This was very fun to code as me and a team of 3 others only had 3 days in total to complete this app.
